Contact Davis Controls today to see how we can find a Nematron product solution for your industrial application.

Nematron

ePC Fanless Series Industrial PCs

Nematron Corporation announces the launch of the new ePC Fanless Series of Industrial Computers, available without the use of rotating media and fans. These new variations of the successful ePC-Series industrial computers address the growing demand to provide industrial computers that have the reliability of a proprietary operator interface while still providing the performance and open connectivity available from a computer. With their Ultra-thin, yet powerful design, unparalleled value, and superb quality at a competitive price, they provide a very feasible alternative to proprietary operator interfaces with the advantage of providing sizes up to 19.0". There are currently four sizes in this series— 15", 17", 19", and a newly released 12.1". All are available with 5-wire Analog Resistive touchscreens and NEMA sealed panel mount front panels.
