

About CSE Semaphore

Semaphore is a leading SCADA system and advanced telemetry solutions provider. As their name implies, they offer simple yet powerful telemetry technology that leverages easy-to-use Web technologies and inexpensive public networks. Their Remote Terminal Unit (RTU) products are easy to configure and offer dramatically reduced costs versus traditional SCADA/PLC systems.

Semaphore products have been delivering leading-edge yet highly cost-effective telemetry solutions to a broad range of industries for over 25 years. Their strength is designing modular innovative solutions with unparalleled IT and communications capabilities attracts a growing group of clients in the asset management, broadcast, chemical/petrochemical, mining, oil & gas, water & wastewater and transportation sectors,

New TBox LT2 RTU combines programmable automation, advanced telemetry, integral wireless, and webserver 2.0

Davis Controls is proud to announce that TBox LT2 is now shipping!

Like TBox Lite, the LT2 is a compact, all-in-one RTU that provides a powerful, Internet-ready solution for remote automation and monitoring. TBox architecture provides up to 50% cost savings over systems that combine PLC, telemetry and SCADA HMI components. With TBox LT2, all remote assets and processes are under control and within reach.
